(54) Title: METHOD FOR ACCESS TO A MEDIUM BY A MULTI-CHANNEL DEVICE

(57) Abstract: Method of accessing a medium on a transmission system having at least two channels, in which a multi-channel device groups at least two channels for the purpose of increasing the bandwidth. The method enables multi-channel devices and single-channel devices to coexist by sending out a preamble and header on each individual channel before the channels are grouped, a single-channel device that may be scanning the channel thus detecting that the message that follows is not intended for itself.
